

Adekanye Oluwatosin Daniel

Backend Developer | Node.js | Express.js | MongoDB

Backend Developer with expertise in designing and scaling RESTful APIs, payment infrastructure, and data handling workflows using Node.js, Express, and MongoDB. Proven track record in implementing secure transaction workflows, cloud asset integration, and role-based access controls. Focused on writing clean, modular code with strong transactional integrity and system reliability.

EXPERIENCE

SelarTech Academy — Backend Developer

Akure, Ondo State, Nigeria | May 2026 – Present

- Developed and maintained the backend API powering the SelarTech Image Archive platform.
- Designed RESTful API endpoints for authentication, image management, projects, resumes, contact submissions, and administrative operations.
- Implemented JWT-based authentication and role-based access control to protect administrative resources.
- Integrated Cloudinary for secure cloud-based image storage and asset management.
- Structured API responses and error-handling mechanisms to provide consistent frontend integration.
- Optimized database operations and backend workflows for reliable application performance.
- Created API documentation using Postman to simplify testing, development, and integration.

CarteCloud TechHub — Junior Frontend Developer

Akure, Ondo State, Nigeria | July 2021 – October 2023

- Developed and maintained responsive web interfaces using modern frontend technologies.
- Collaborated with other developers to implement application features and integrate frontend interfaces with backend services.
- Debugged UI issues and improved application usability across different screen sizes.
- Worked with Git-based development workflows and maintained reusable frontend components.

EDUCATION

Federal University of Technology, Akure (FUTA)

B.Tech. Computer Science | October 2022 – October 2027

PROJECTS

PayPulse — Digital Wallet & Payment Processing System

- Engineered a backend wallet system supporting peer-to-peer transfers, deposits, bank withdrawals, and transaction tracking.
- Integrated the Paystack API for payment processing, transaction verification, bank information retrieval, and withdrawal workflows.
- Implemented MongoDB transaction sessions to maintain transactional integrity and consistency during wallet operations.
- Developed secure transaction workflows including PIN verification, balance validation, self-transfer prevention, and transaction references.
- Implemented bank account name resolution to verify recipient details before initiating withdrawals.
- Designed payment webhook handling to process and verify real-time transaction notifications.
- Implemented transaction logging and audit information such as device and IP metadata for improved system monitoring.

Smart Inventory & Sales Management System

- Developed a full-stack inventory and sales management platform for managing products, categories, suppliers, stock levels, and sales transactions.
- Built RESTful APIs using Node.js and Express.js for product, supplier, category, user, sales, stock movement, and reporting operations.
- Implemented JWT authentication and Role-Based Access Control (RBAC) for Admin, Manager, and Staff users.
- Developed a Point of Sale (POS) workflow for product search, cart management, sales processing, and automatic inventory updates.
- Implemented stock movement tracking to maintain an auditable history of inventory additions and reductions.
- Built MongoDB aggregation pipelines for revenue, profit, sales volume, best-selling products, and staff performance reports.
- Implemented MongoDB relationships using Mongoose references and population for related entities such as products, categories, and suppliers.
- Developed the React frontend using Context API for authentication and global application state.
- Implemented protected routes and role-based navigation to restrict access to administrative functionality.
- Integrated the frontend and backend through REST APIs and configured CORS for secure cross-origin communication.

TECHNICAL SKILLS

Languages: JavaScript, HTML, CSS

Backend: Node.js, Express.js, RESTful APIs

Frontend: React.js, Tailwind CSS

Databases: MongoDB, Mongoose, MySQL, PostgreSQL

Authentication & Security: JWT, bcrypt, Role Based Access Control (RBAC), CORS

Integrations: Paystack API, Cloudinary, Third-Party APIs

Tools: Git, GitHub, Postman, VS Code, Vite

CORE COMPETENCIES

- REST API Development
- Backend Architecture
- Database Design & Management
- Payment Integration
- Authentication & Authorization
- MongoDB Aggregation
- Transaction Management
- API Documentation
- Frontend-Backend Integration
- Debugging & Problem Solving

LANGUAGES

English — Native
